**Amphiprion percula* is classified in the subseries Ovalentaria in the clade Percomorpha.

[‡]Indicates proteins and genes that were excluded from phylogenetic analysis because only partial sequences were available.

Orders, species, common names, nomenclature, databases, accession numbers, and references for androgen receptor protein sequences from 22 representative fish species [18 teleost fishes (Infraclass: Teleostii), 1 non-teleost ray-finned fish (Infraclass: Holostei), 2 cartilaginous fishes (Class: Chondrichthyes), and 1 jawless fish (Class: Hyperoartia)] and 4 outgroup species (*Xenopus laevis*, *Gallus gallus*, *Mus musculus*, and *Homo sapiens*) that were selected for phylogenetic analysis (Fig. 2). The “Current Nomenclature” columns contain the protein and gene names currently used for each sequence, whereas the “Proposed Nomenclature” columns contain the protein and gene names recommended for each sequence based on the results of our analysis. Protein and gene names that differ between the “Current Nomenclature” and “Proposed Nomenclature” columns are shown in **bold**. Abbreviations: *ar*, androgen receptor gene; AR, androgen receptor protein; *ar1*, androgen receptor 1 gene; *ar1a*, androgen receptor 1a gene; *ar1b*, androgen receptor 1b gene; *ar2*, androgen receptor 2 gene; *ar2a*, androgen receptor 2a gene; *ar2b*, androgen receptor 2b gene; *ara*, androgen receptor alpha gene; *AR α* , androgen receptor alpha protein; *AR α 1*, androgen receptor alpha 1 protein; *AR α 2*, androgen receptor alpha 2 protein; *ar β* , androgen receptor beta gene; *AR β* , androgen receptor beta protein; *ar β 1*, androgen receptor beta 1 gene; *AR β 1*, androgen receptor beta 1 protein; *ar β 2*, androgen receptor beta 2 gene; *AR β 2*, androgen receptor beta 2 protein; NCBI, National Center for Biotechnology Information; VGP, Vertebrate Genomes Project.
